Family culture and fertility outcomes - Evidence from American siblings

Martina Eschelbach, Deutsche Bundesbank (former: University of Erlangen-Nuremberg)

Database

The database has been drawn from the "National Longitudinal Survey of Youth 1979".

If you whish to replicate the results of the paper, you will need the following variables:

R0000100, "R0000149", "R0000150", "R0000151", "R0000152", "R0000153", "R0000154", "R0000155", "R0000156", "R0000157", "R0000158", "R0000159", "R0000500", "R0001100", "R0001800", "R0001900", "R0002100", "R0002900", "R0006100", "R0006500", "R0007900", "R0008200", "R0008500", "R0009100", "R0013100", "R0013200", "R0013400", "R0015300", "R0214700", "R0214800", "R0217501", "R0217900", "R0405601", "R0618601", "R0751100", "R0898401", "R1144901", "R1520101", "R1890801", "R2257901", "R2445301", "R2871000", "R3074700", "R3401400", "R3656800", "R4007300", "R4418400", "R5081400", "R5166700", "R6479300", "R7007000", "R7704300", "R8496700", "T0988500", "T2210500", "T2210700", "T2217700"

Data access

The data are publicly available after registration:
(https://www.nlsinfo.org/investigator/pages/login.jsp)

Programme

Based on the variables you have extracted from https://www.nlsinfo.org/investigator/pages/login.jsp please generate a Stata dataset called "nlsysibs.dta" and store it together with the do-file "programme.do" on your computer.

Please use "programme.do". The programme contains the necessary code to prepare the dataset for the analysis and to replicate the results presented in the paper.

Using the command "xtmixed" in a do-file sometimes produces an error with code r(198). In this case, please run only part I of the do-file with the do-file editor and insert parts II-VI of the do-file seperately into the command window.
