

Youth unemployment after apprenticeship training and individual, occupation and training employer characteristics by Jens Mohrenweiser and Thomas Zwick

forthcoming in Journal of Economics and Statistics

The paper is based on the second longitudinal version of the Linked-Employer-Employee (LIAB) data of the Institute of Employment Research in Nuremberg (IAB). Data access is possible via on-site use and via remote data access. Further information on data access can be found here: [http://fdz.iab.de/en/Integrated Establishment and Individual Data/LIAB.aspx](http://fdz.iab.de/en/Integrated_Establishment_and_Individual_Data/LIAB.aspx).

Further information on the data set can be found here:

[http://fdz.iab.de/en/Integrated Establishment and Individual Data/LIAB.aspx](http://fdz.iab.de/en/Integrated_Establishment_and_Individual_Data/LIAB.aspx).

Attached are the original STATA do-files that have the following structure:

Master_Jahrbücher.txt: master file that runs all files in the correct order

21: choice of variables from establishment data and data preparation

22: waves of establishment data are merged and variables recoded

23: merge establishment data with individual data and recode individual data

24: remaining individual data variables are recoded and processed

26: data from establishment history panel (BHP) are recoded and waves are merged

27: BHP data are merged with other data

32: regressions and data description
